association

Want to know more about generating your own renewable energy?

We Energies and the Midwest Renewable Energy Association (MREA) are partnering with a number of local host sites to offer three renewable energy seminars. These seminars provide homeowners and small-business owners with information about generating their own renewable energy.

The seminars being offered include:

- **Solar 101**
- **Wind Systems for Consumers**
- **Purchasing and Owning a Renewable Energy System**

Wind Systems for Consumers and Solar 101 will introduce you to current technology, site selection, system sizing, available financial incentives, and installer selection. Purchasing and Owning a Renewable Energy System will include a discussion on system maintenance and the economics of renewable energy systems. Reference materials, such as Focus on Energy fact sheets, will be provided to all in attendance, and demonstration equipment will be available for viewing. A question and answer period is included in each seminar, and there are no prerequisites to registering for the event.
